## DETAILED ACTION

1. The applicant's election of Group I, claims **1-10** and **14-15** on **12/16/03** has been entered and acknowledged.

Claims **1-10, and 14-15** are present for examination.

Claims **11-13** are withdrawn from consideration.

2. In claim 3, line 2, the word "connectedin" is misspelled. Correction is requested.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims **1, 2, 4, 9, 14** are rejected under 35 U.S.C. 103(a) as being unpatentable over **Takashima (5,894,447)**.

Takashima (see Fig. 6) clearly shows a non-volatile memory device comprising at least memory cell (see example selected cell connected to bitline DL1, DL2) and a plurality of sub-cells (as magneto-resistive elements R connected in series) included in such selected cell, which also constitutes one such memory cell as a whole. The sub-cells (or resistive

elements R) is seen as connected in parallel, and there is a selection transistor Q2 to Q7), each is connected to select a respective memory cell associated with a data line (DL0 to DLn shown) as recited.

5. Other claims contain allowable subject matter over prior arts of record but dependent upon rejected base claims.
